

Older motorists could see new driving law changes as trial looks to crack down on headlight glare

Story by Felix Reeves 06 Nov 2024

Motorists and experts are praising ongoing action being taken to look at the effect of headlight glare on drivers, particularly the elderly. Last month, it was announced that the Transport Research Laboratory (TRL) would be working with the Department for Transport to investigate the causes of headlight glare and assess how it impacts motorists.

Motorists and experts are praising ongoing action being taken to look at the effect of headlight glare on drivers, particularly the elderly.

Last month, it was announced that the Transport Research Laboratory (TRL) would be working with the Department for Transport to investigate the causes of headlight glare and assess how it impacts motorists.

TRL will equip a vehicle with specialist instruments to measure light levels experienced by drivers during real driving on UK roads, with the project running in Berkshire until spring 2025.

The investigation will look into the effect of other vehicles, weather conditions and ambient lighting, with recommendations being sent to the Department for Transport once the trial is completed.
